The screenshot shows a web browser window with a blue header bar. The address bar contains the URL https://wikitech.wikimedia.org/wiki/HTTPS/Browser_Recommendations. The page content is as follows:

For users of Microsoft Windows

- **Windows XP**
 - If you *must* use Windows XP, install and use **Firefox 52 ESR** instead of Internet Explorer before **2017-10-17** to avoid loss of access to our wikis!
 - If possible, please upgrade to Windows 7 or higher, or any other operating system available. Windows XP has **very serious security flaws**. Microsoft ended all technical support for this system version in 2014. ^[3] Microsoft provides no more security updates for the many flaws which have been discovered in Windows XP and its version of Internet Explorer after 2014.
 - *Update 2017-08-17*: More-detailed technical information about removal of IE-on-XP support from our projects by 2017-10-17 is available at [HTTPS/3DES_Deprecation](#)
- **Windows Vista** - Microsoft no longer supports Vista, and does not provide security updates since April 2017^[3].
 - Advice is the generally the same as XP: You should upgrade to Windows 7 or Windows 10.
 - If you cannot upgrade, your best option is to install and **use Firefox 52 ESR** instead of Explorer.
- **Windows 7 through 10**
 - Internet Explorer 11 is the **only** version of IE that is currently supported by Microsoft. There are no security updates for Internet Explorer 10 and older versions, since 2016.^[4] These earlier versions also do not have modern HTTPS capabilities. It is highly recommended that you either upgrade to Internet Explorer 11, or the **Microsoft Edge** browser.
 - Alternatively, you can install and use a different browser: [Firefox](#), [Chrome](#), or [Opera](#).
 - Please also ensure you stay up-to-date on security updates from Windows Update, and ensure you regularly upgrade your alternative browser if applicable.

For users of Apple Mac OS X

Upgrade your operating system to Mac OS 10.11 (El Capitan) or higher if your hardware supports it. If that is not possible, upgrade to the latest Mac OS release available for your computer, and consider installing an alternate secure browser instead of Safari. Such as [Chrome](#), [Firefox](#), or [Opera](#).
